Biography Born in Santiago de Chile on December 15, 1868, Leopoldo Fernández de la Cruz joined the Order of the Blessed Virgin Mary of Mercy. He was ordained a priest in 1892 and he was appointed vicar general of the diocese of Santiago. He was consecrated a bishop of the Diocese of Santiago de Chile in 1905. In 1925, Pope Pius XI appointed him an auxiliary bishop of Santiago and in 1935 he was appointed Archbishop of Santiago. He became a cardinal in 1936. On September 7, 1942, Pope Pius XII named him Archbishop of La Serena. He died on April 24, 1945. In a magnetic disk drive such as a hard disk drive, a magnetic head performs reading and writing by magnetically recording information to and from a magnetic disk. The increase in the recording density has been advanced by realizing a magnetic disk drive of an in-plane magnetic recording system where a main magnetic pole (to be referred to as a pole hereinafter) is disposed so as to be in parallel to the surface of a magnetic disk, and a track width is decreased. In the in-plane magnetic recording system, it is desired that a gap be narrowed in order to stabilize the writing magnetic field. A narrowed writing gap causes the writing edge to be positioned near the magnetic disk. A signal obtained at the position at which writing is not performed deteriorates in signal quality. To prevent this from occurring, a heat-assisted magnetic recording technique is employed where the writing gap is heated to thereby maintain an optimal writing condition. The conventional heat 82157476af
